DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 21, 22, 25-28, 30-34, 36, 37, 39, and 42 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,373,470. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claimed

invention is somewhat a different recitation of "6,373,470 Patent. For instance, in claims 20, 32, 36, and 42 of the present application and claim 1 of the 6,373, 470 Patent, the application claims.

As to claims 20, 32, 36, and 42, the present invention claims a base member, an integral top member, a bottom member and an electronic switch as to perform an onscreen action but 6,373,470 Patent teaches a base member, a top member, and an electronic switch for processing and transmitting monitor cursor control information.

It would have been obvious to a person of ordinary skill in the art to know that processing and transmitting monitor cursor control information is the same as performing an onscreen action.

As to the dependent claims, all the limitations can be found in the patented claims.
